
Foundations on Rock

Duncan C. Wyllie

Principal, Golder Associates, Consulting Engineers, Vancouver, Canada

With a Foreword by Richard E. Goodman

Professor of Geological Engineering, University of California, Berkeley,
USA

E & FN SPON

An Imprint of Chapman & Hall

London · New York · Tokyo · Melbourne · Madras

Published by Chapman & Hall, 2-6 Boundary Row, London, SE1 8HN

Contents

Introduction	xi
Foreword	xiii
Notation	xiv
Note	xviii
1 Characteristics of rock foundations	1
1.1 Types of rock foundation	1
1.1.1 Spread footings	2
1.1.2 Socketed piers	4
1.1.3 Tension foundations	4
1.2 Performance of foundations on rock	4
1.2.1 Settlement and bearing capacity failures	4
1.2.2 Creep	5
1.2.3 Block failure	5
1.2.4 Failure of socketed piers and tension anchors	7
1.2.5 Influence of geological structure	7
1.2.6 Excavation methods	7
1.2.7 Reinforcement	7
1.3 Structural loads	8
1.3.1 Buildings	9
1.3.2 Bridges	9
1.3.3 Dams	10
1.3.4 Tension foundations	10
1.4 Allowable settlement	10
1.4.1 Buildings	10
1.4.2 Bridges	11
1.4.3 Dams	12
1.5 Influence of ground water on foundation performance	12
1.5.1 Dams	14
1.5.2 Tensioned anchors	14
1.6 Factor of safety and reliability analysis	14
1.6.1 Factor of safety analysis	15
1.6.2 Limit states design	16
1.6.3 Sensitivity analysis	16
1.6.4 Coefficient of reliability	17
1.7 References	21

2 Structural geology	23
2.1 Fracture characteristics	23
2.1.1 Types of fracture	23
2.1.2 Fracture orientation and dimensions	25
2.2 Orientation of fractures	26
2.3 Stereographic projection	27
2.3.1 Pole plots	29
2.3.2 Pole density	30
2.3.3 Great circles	32
2.4 Types of foundation failure	33
2.5 Kinematic analysis	35
2.5.1 Planar failure	37
2.5.2 Wedge failures	37
2.5.3 Toppling failures	37
2.5.4 Friction cone	37
2.6 Probabilistic analysis of structural geology	39
2.6.1 Fracture orientation	39
2.6.2 Fracture length and spacing	40
2.7 References	41
3 Rock strength and deformability	42
3.1 Range of rock strength conditions	42
3.2 Deformation modulus	44
3.2.1 Intact rock modulus	45
3.2.2 Stress-strain behaviour of fractured rock	47
3.2.3 Size effects on deformation modulus	48
3.2.4 Fracture spacing and modulus	50
3.2.5 Modulus of anisotropic rock	51
3.2.6 Modulus/rock mass quality relationships	52
3.3 Compressive strength	53
3.3.1 Compressive strength of intact rock	54
3.3.2 Compressive strength of fractured rock	56
3.4 Shear strength	58
3.4.1 Mohr-Coulomb materials	59
3.4.2 Shear strength of fractures	59
3.4.3 Shear strength testing	63
3.4.4 Shear strength of fractured rock	64
3.5 Tensile strength	68
3.6 Time-dependent properties	69
3.6.1 Weathering	69
3.6.2 Swelling	70
3.6.3 Creep	71
3.7 References	73
4 Investigation and <i>in situ</i> testing methods	77
4.1 Site selection	77
4.1.1 Aerial and terrestrial photography	78

4.1.2	Geophysics	80
4.2	Geological mapping	81
4.2.1	Standard geology descriptions	83
4.2.2	Fracture mapping	87
4.3	Drilling	90
4.3.1	Diamond drilling	90
4.3.2	Percussion drilling	93
4.3.3	Calyx drilling	94
4.4	Ground water measurements	94
4.4.1	Water pressure measurements	95
4.4.2	Permeability measurements	98
4.5	<i>In situ</i> modulus and shear strength testing	101
4.5.1	Modulus testing	101
4.5.2	Direct shear tests	110
4.6	References	111
5	Bearing capacity, settlement and stress distribution	114
5.1	Introduction	114
5.2	Bearing capacity	116
5.2.1	Building codes	116
5.2.2	Bearing capacity of fractured rock	117
5.2.3	Recessed footings ¹	120
5.2.4	Bearing capacity factors	120
5.2.5	Foundations on sloping ground	120
5.2.6	Bearing capacity of shallow dipping bedded formations	122
5.2.7	Bearing capacity of layered formations	124
5.2.8	Bearing capacity of karstic formations	126
5.3	Settlement	128
5.3.1	Elastic rock	129
5.3.2	Transversely isotropic rock	134
5.3.3	Inelastic rock	136
5.4	Stress distributions in foundations	137
5.4.1	Isotropic rock	138
5.4.2	Layered formations	142
5.4.3	Transversely isotropic rock	142
5.4.4	Eccentrically loaded footings	143
5.5 ^c	References	145
6	Stability of foundations	147
6.1	Introduction	147
6.2	Stability of sliding blocks	147
6.3	Stability of wedge blocks	153
6.4	Three-dimensional stability analysis	155
6.5	Stability of toppling blocks	156
6.6	Stability of fractured rock masses	160
6.7	Seismic design	162
6.8	References	164

7 Foundations of gravity and embankment dams	165
7.1 Introduction	165
7.1.1 Dam performance statistics	166
7.1.2 Foundation design for gravity and embankment dams	167
7.1.3 Loads on dams	168
7.1.4 Loading combinations	169
7.2 Sliding stability	169
7.2.1 Geological conditions causing sliding	170
7.2.2 Shear strength	170
7.2.3 Water pressure distributions	170
7.2.4 Stability analysis	172
7.2.5 Factor of safety	175
7.2.6 Examples of stabilization	175
7.3 Overturning and stress distributions in foundations	177
7.3.1 Overturning	178
7.3.2 Stress distributions in foundations	178
7.4 Earthquake response of dams	181
7.4.1 Introduction	181
7.4.2 Sliding stability and overturning under seismic loads	182
7.4.3 Finite element analysis	184
7.4.4 Displacement analysis	185
7.5 Preparation of rock surfaces	187
7.5.1 Shaping	187
7.5.2 Cleaning and sealing	188
7.5.3 Rebound	189
7.5.4 Solution cavities	189
7.6 Grouting and drainage	190
7.6.1 Grouting functions	190
7.6.2 Grout types	191
7.6.3 Mechanism of grouting	191
7.6.4 Drilling method	193
7.6.5 Hole patterns	193
7.6.6 Grout mixes	195
7.6.7 Grout strength	195
7.6.8 Grout pressures	196
7.6.9 Grouting procedures	196
7.6.10 Permeability criteria for grouted rock	197
7.6.11 Monitoring grouting operations	199
7.6.12 Leaching	199
7.6.13 Drainage	200
7.7 References	201
 8 Rock-socketed piers	 205
8.1 Introduction	205
8.1.1 Types of deep foundations	205
8.1.2 Investigations for socketed piers	205
8.2 Load capacity of socketed piers in compression	207

8.2.1	Mechanism of load transfer	207
8.2.2	Shear behaviour of rock sockets	209
8.2.3	Factors affecting the load capacity of socketed piers	210
8.2.4	Socketed piers in karstic formations	217
8.3	Design values: Side-wall resistance and end bearing	217
8.3.1	Side-wall shear resistance	218
8.3.2	End-bearing capacity	218
8.4	Axial deformation	219
8.4.1	Settlement mechanism of socketed piers	219
8.4.2	Settlement of side-wall resistance sockets	221
8.4.3	Settlement of end-loaded piers	222
8.4.4	Settlement of socketed, end-bearing piers	223
8.4.5	Socketed piers with pre-load applied at base	226
8.5	Uplift	227
8.5.1	Uplift resistance in side-wall shear	228
8.5.2	Uplift resistance of belled piers	228
8.6	Laterally loaded socketed piers	228
8.6.1	Computing lateral deflection with p - y curves	229
8.6.2	Socket stability under lateral load	234
8.7	References	236
9	Tension foundations	238
9.1	Introduction	238
9.2	Anchor materials and anchorage methods	240
9.2.1	Allowable working loads and safety factors	241
9.2.2	Steel relaxation	241
9.2.3	Strength properties of steel bar and strand	243
9.2.4	Applications of rigid bar anchors	243
9.2.5	Applications of strand anchors	247
9.2.6	Cement grout anchorage	247
9.2.7	Resin grout anchorage	251
9.2.8	Mechanical anchorage	253
9.3	Design procedure for tensioned anchors	254
9.3.1	Mechanics of load transfer between anchor, grout and rock	254
9.3.2	Allowable bond stresses and anchor design	256
9.3.3	Prestressed and passive anchors	260
9.3.4	Uplift capacity of rock anchors	261
9.3.5	Group action	268
9.3.6	Cyclic loading of anchors	268
9.3.7	Time-dependent behaviour and creep	268
9.3.8	Effect of blasting on anchorage	269
9.3.9	Anchors in permafrost	270
9.4	Corrosion protection	271
9.4.1	Mechanism of corrosion	271
9.4.2	Types of corrosion	273
9.4.3	Corrosive conditions	274
9.4.4	Corrosion-protection methods	274

9.5	Installation and testing	276
9.5.1	Water testing	277
9.5.2	Load testing	277
9.5.3	Acceptance criteria	280
9.6	References	281
10	Construction methods	283
10.1	Introduction	283
10.2	Drilling	283
10.2.1	Diamond drilling	284
10.2.2	Percussion drilling	286
10.2.3	Rotary drills	289
10.2.4	Overburden drilling	289
10.2.5	Large-diameter drilling	291
10.2.6	Directional drilling	292
10.3	Blasting and non-explosive rock excavation	295
10.3.1	Rock fracture by explosives	295
10.3.2	Controlled blasting	297
10.3.3	Blasting horizontal surfaces	299
10.3.4	Ground vibration control	299
10.3.5	Vibration in uncured concrete	303
10.3.6	Non-explosive excavation	305
10.4	Bearing surface improvement and rock reinforcement	305
10.4.1	Trim blasting	307
10.4.2	Surface preparation	307
10.4.3	Dental concrete	307
10.4.4	Shotcrete	307
10.4.5	Pins	309
10.4.6	Rock bolts	309
10.4.7	Tensioned rock anchors	310
10.4.8	Concrete buttress	310
10.4.9	Drain holes	310
10.5	Contracts and specifications	310
10.5.1	Components of contract documents	311
10.5.2	Types of contract	312
10.5.3	Rock excavation and reinforcement specifications	313
10.6	References	317
Appendix I	Stereonet for hand plotting of structural geology data	319
Appendix II	Field mapping data sheets	323
Appendix III	Conversion factors	326
